ACF - Collaboration in Early Care & Education
May 24-25, 2010; Washington, DC

Main themes

- Changing nature of collaboration on early childhood services in Cuyahoga County
- Collaboration's role in -
 - Framing child indicators for use in mobilizing and monitoring
 - Developing programmatic refinements
- Providing leadership in developing State's approach

Program strategies to support key outcomes

Invest in Children Logic Model

Focuses of evaluation in IIC

Phase I: 1999 – 2003

- Building data systems
- Establishing baseline
- Evaluating programs as taken to scale
- Tracking child well being indicators

Phase II: 2004 – 2005

- Continuing to track scope and reach
- Informing program development (child care capacity /quality studies; child abuse and neglect)
- Evaluation of new pilot programs (primary lead prevention and early learning)
- Continue to track child well being

Phase III: 2006 – 2009

- Continue to track scope and reach
- Increased focus on child outcomes
- Evaluation of new pilot programs (UPK, medical home, early childhood mental health)
- Preparation for longitudinal study

Systems for promoting school readiness

- Nine domains*:
 - Home visiting/family support/parent counseling
 - Foster care/child protective services
 - Registered child care
 - Head Start
 - State and local Pre-K
 - Medicaid, SCHIP, EPSDT
 - Immunizations and lead screenings
 - IDEA (Individuals with Disabilities Education Improvement Act)
 - Kindergarten instruments to assess school readiness

From Bruner, C. (2006) School Readiness Resource Guide and Toolkit: Using Neighborhood Data to Spur Action. Draft. Des Moines, IA: Child and Family Policy Center.

Tracking well-being

The logo for "Invest in Children" is a yellow graphic consisting of two overlapping, curved shapes that form a central diamond-like area. The words "Invest" and "in Children" are written in white, sans-serif font, positioned on the left and right sides of the central area respectively.

Invest in Children

- With the launch of the County's Invest in Children in 1999, a study of the effort commenced, including tracking indicators of child well-being
 - ✓ Tracking trends in population and birth characteristics
 - ✓ Tracking mobilizing indicators such as family self-sufficiency and child poverty, child care vouchers, birth outcomes, child maltreatment, child health insurance, enrollment in regulated child care

High poverty but less cash aid

Better prenatal care but birth outcomes tough to influence

More children have health insurance

More children enrolled in early care and education

Less child maltreatment but risk remains the same

Invest in Children: How do you measure a "system" ?

Children Served by Invest in Children Programs, 2007

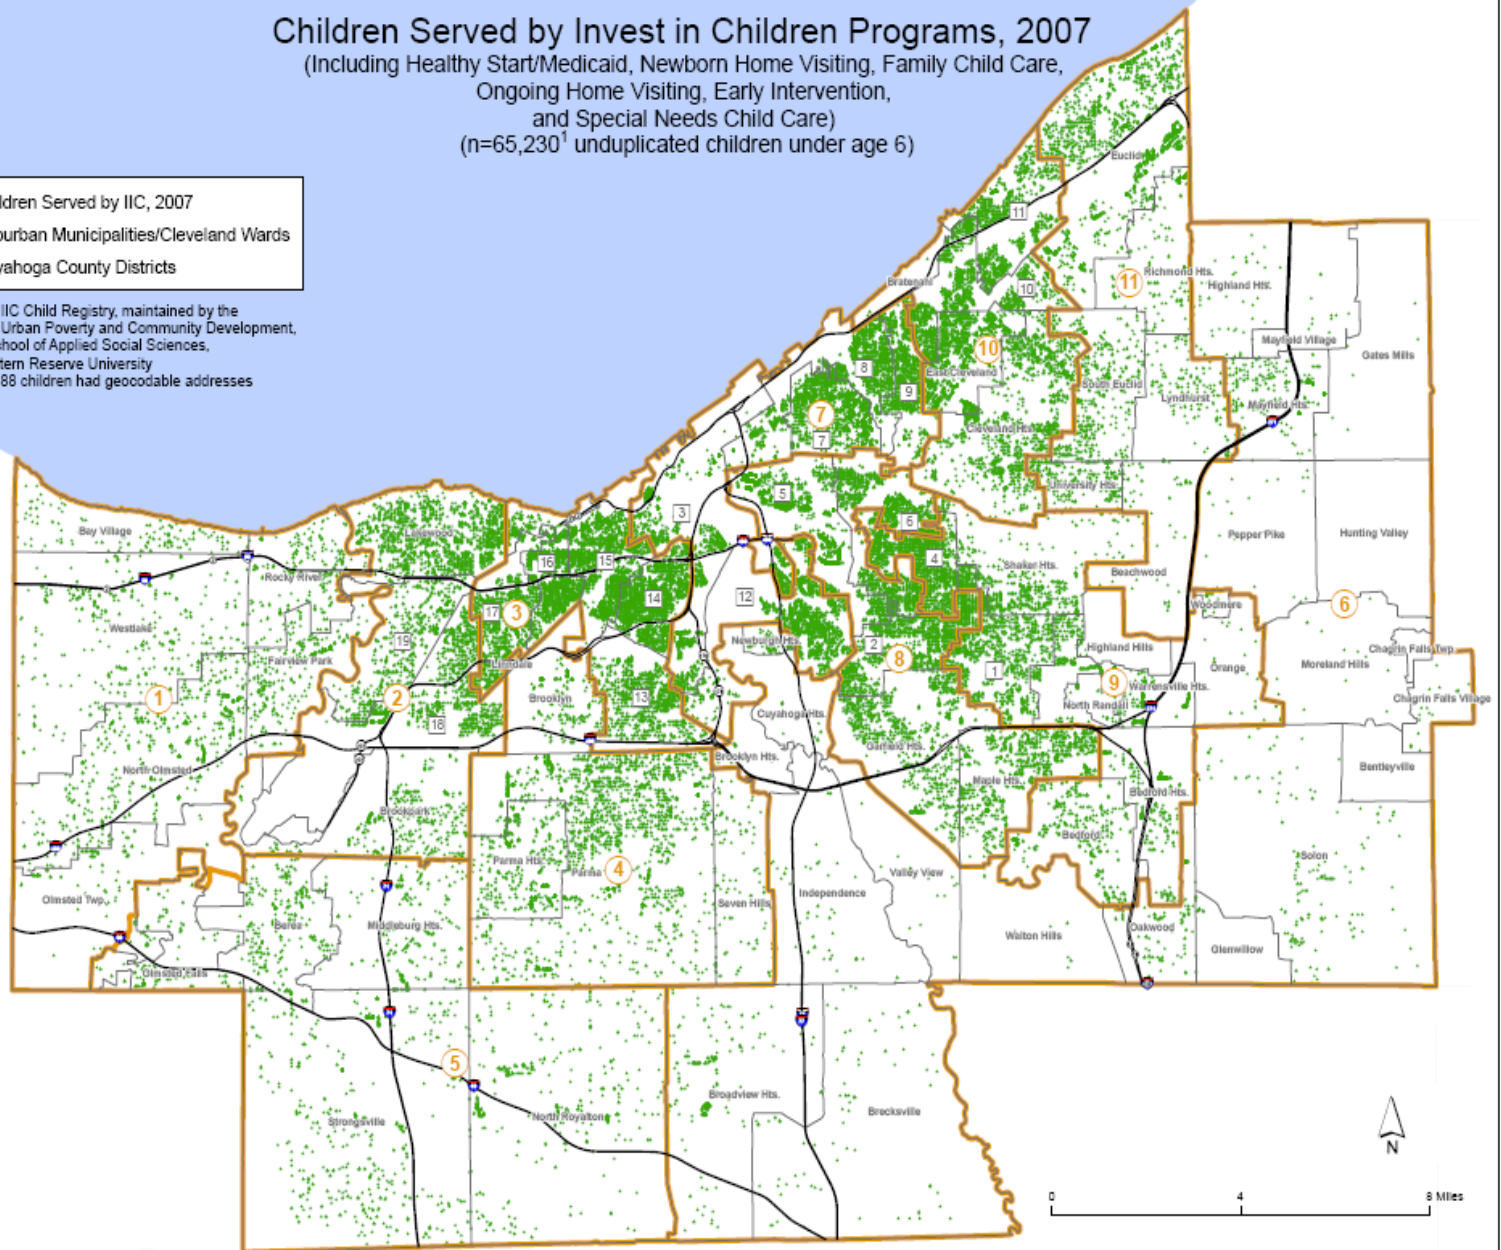

(Including Healthy Start/Medicaid, Newborn Home Visiting, Family Child Care,
Ongoing Home Visiting, Early Intervention,
and Special Needs Child Care)

(n=65,230¹ unduplicated children under age 6)

- Children Served by IIC, 2007
- Suburban Municipalities/Cleveland Wards
- ▮ Cuyahoga County Districts

Data from IIC Child Registry, maintained by the
Center on Urban Poverty and Community Development,
Mandel School of Applied Social Sciences,
Case Western Reserve University

¹Only 61,888 children had geocodable addresses

Improvements on a well-being indicator but...

Outreach efforts were very successful at enrolling eligible children in Healthy Start (SCHIP)

The number of children 0-6 without health insurance declined from 10.5% in 1999 to 3.98% in 2008.

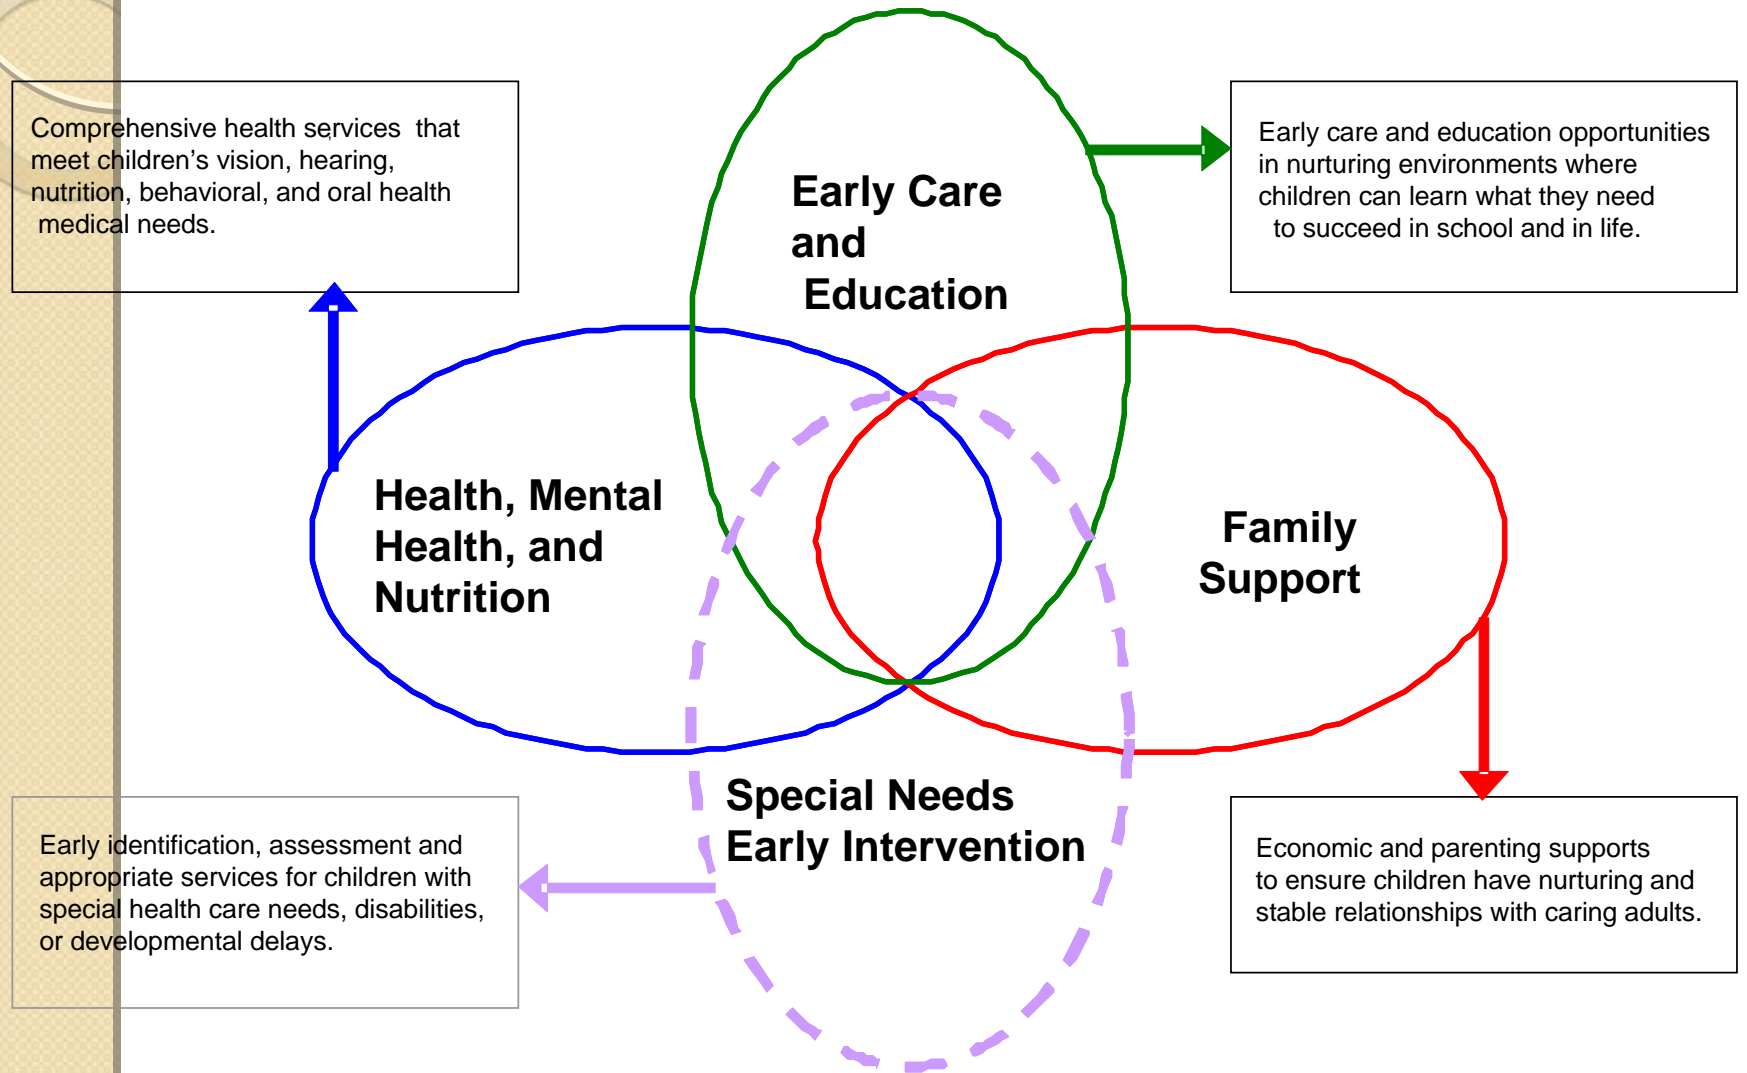

Should we celebrate a victory? No.. Data showed poor utilization rates for well child visits.

- *Medical Home Pilot Program (in process)* 86% of the participating families completed all recommended infant well child visits compared with 42% for all children covered by Medicaid.

State-level developments

- Governor's Early Childhood Cabinet
- Center for Early Childhood Development within state department of education
 - Address all aspects of children's physical, social, emotional, cognitive and language development.
 - Focus on comprehensive (physical and behavioral health and developmental) preventative supports and services for children and their families beginning with the prenatal period.

Early Childhood Development System

Systems scan observations

- Efforts underway to better integrate and coordinate the many parts of the system
- Wealth of data to inform systems-level decision making but systematic access still needed to key data - Head Start students records, lead screenings, kindergarten readiness assessment records
- Structural and institutional factors challenge a seamless system from birth to kindergarten
- Other efforts/initiatives need to be better integrated into the county's service system -Voices for Ohio's Children, Children's Defense Fund – Ohio, Ohio Groundwork Campaign, Build Ohio, Ohio Child Care Resource and Referral Association

Risk/Service Use Ratio by Census Tract Cuyahoga County, Ohio

Risk/Service Use Ratio

Conclusion/Next Steps

- Maintenance of collaborative over time
 - Shifting funding environment
 - Shifting focal outcomes within collaboration
- Formulation of a seamless system faces challenges
 - Programmatic targeting leads to transition issues
 - Funding stream constraints
 - Lack of willingness to engage in a system view
 - Effectively incorporating K-3 in system
- More data needed
 - Data on quality of service/settings and relative value
 - Data on critical milestones and outcomes (e.g., kindergarten readiness)
